

Report Builder post-release correction

Local owner-review evidence

Branch: codex/report-builder-post-release-correction

Base production SHA: 63ee6552c460943c6897899a52876ef9f670ae7c

No deployment; deterministic local fixture only.

This package covers the corrected panel workflow, deletion safeguards, contained desktop workspace, fit modes, template gallery, human-readable warning labels, and responsive regression measurements.

Desktop builder baseline

Committed local builder shell used as visual baseline; current correction QA separately verified Fit Page, Fit Width, and contained scrolling in the fixture.

Text inspector and Delete

Selected text inspector, visible Delete action, and preserved Elements library.

Independent Layers panel

Layers is a separate right-panel mode and does not replace the left Elements library.

Pages and canonical labels

Page labels use one canonical ordinal/title policy without Page 1 Page 1 duplication.

FIXTURE CONTENT SET

Owner Review — Blank Frequency

Default and custom-set resolution are safe, local-only fixtures.

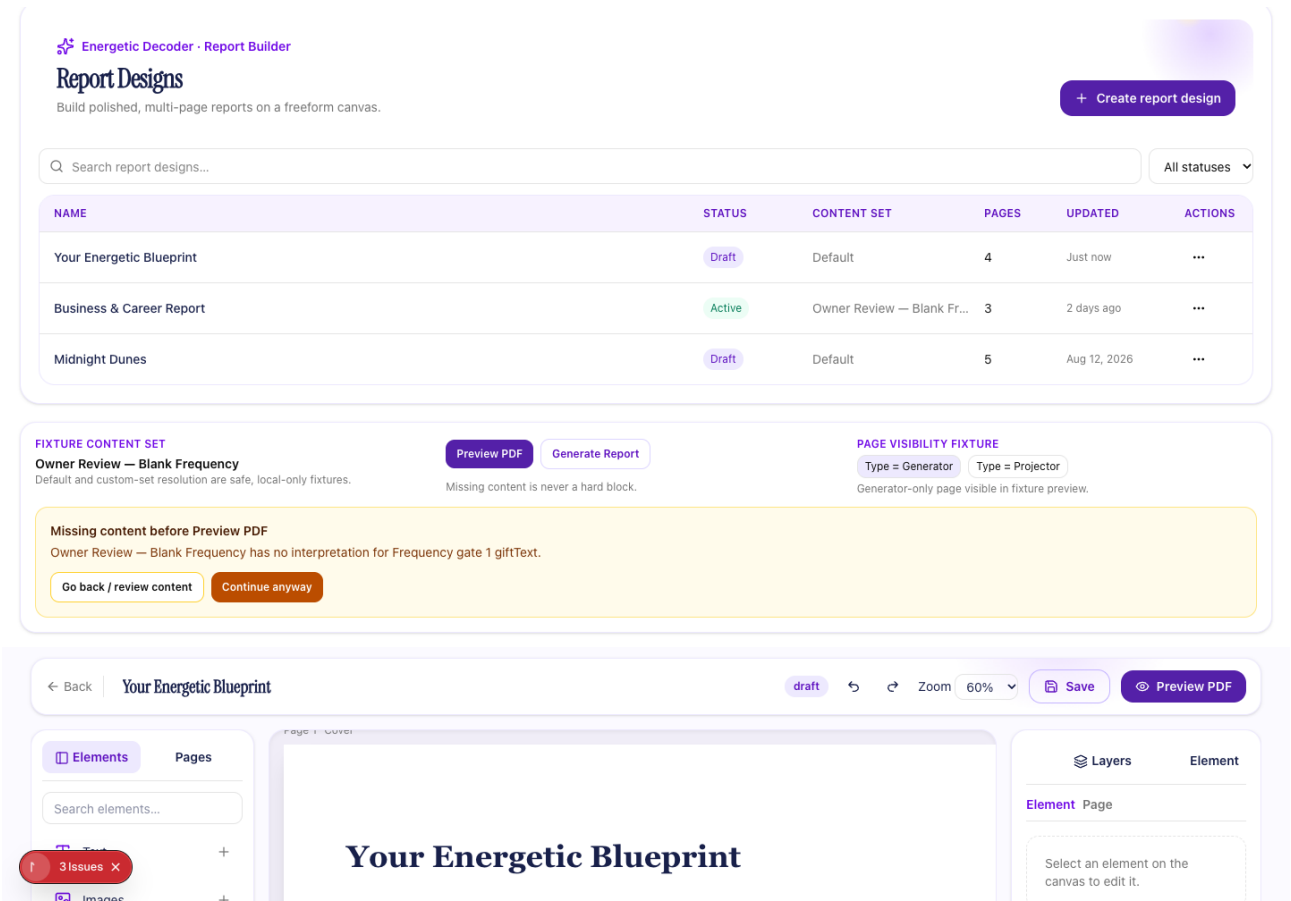

Chart piece and sample data

Chart piece workflow remains available; the editor discloses deterministic sample chart data.

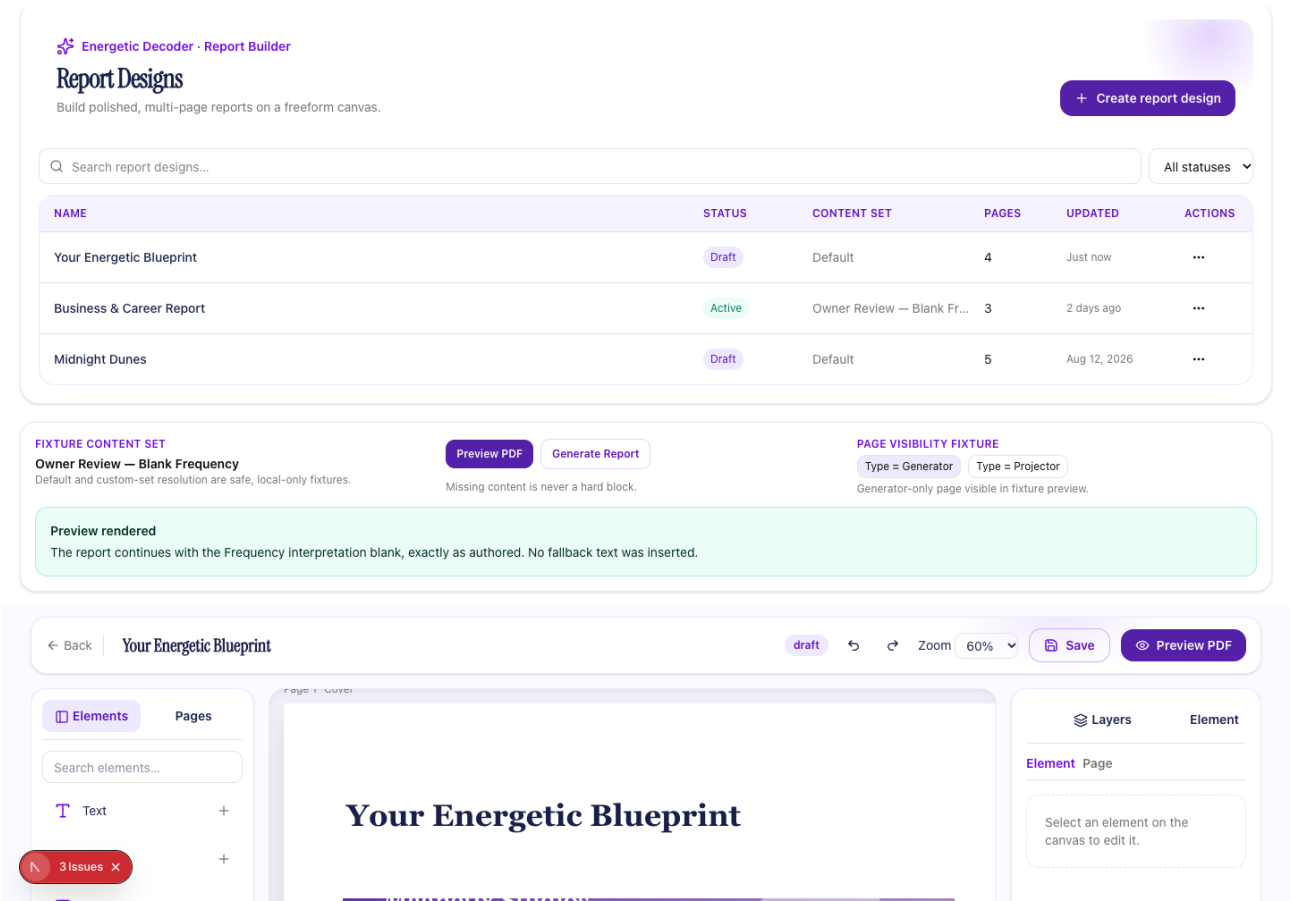

Missing-content warning baseline

Existing warning-state capture; current correction QA verified practitioner-facing label resolution while preserving warning-only behavior.

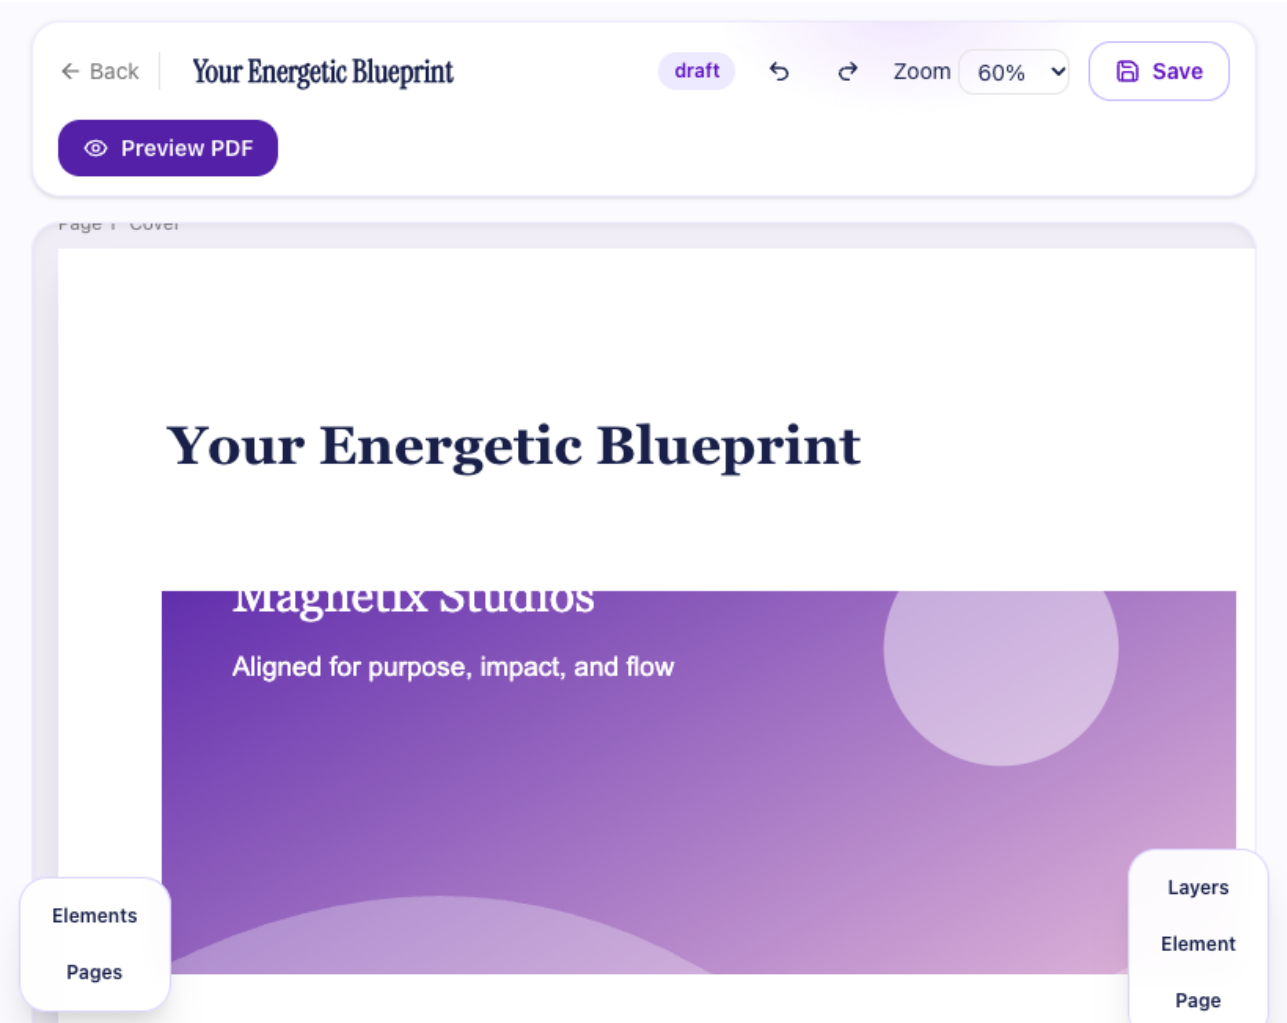

Preview flow baseline

Existing preview-state capture; the actual PDF pipeline is now wired through the transient preview endpoint, and the rendered fixture PDF is delivered separately.

Tablet regression

820px overlay behavior remains available without page-level horizontal overflow.

Phone regression

390px bottom-sheet behavior remains available without page-level horizontal overflow.

Responsive measurements and QA summary

The local fixture was measured with document and body scroll widths equal to the viewport at all requested widths. Fit Page and Fit Width were both exercised. Adding Text opened the Element inspector while preserving the Elements library; keyboard Delete removed the selected element and Undo restored it; template categories opened galleries and insertion required an explicit Use template action.

Viewport	document.scrollWidth	clientWidth	Result
390	390	390	PASS
360	360	360	PASS
375	375	375	PASS
430	430	430	PASS
768	768	768	PASS
820	820	820	PASS
1024	1024	1024	PASS
1280	1280	1280	PASS
1440	1440	1440	PASS

The separate preview PDF is rendered by the actual ReportDesignPdfDocument path from deterministic fixture data. No migrations, production writes, pushes, deployments, or Build Log updates occurred.
